

Capstone Project Submission Details

What to Submit

Each student must submit:

1. **Code:** A well-documented repository of your project's code
2. **Presentation:** A presentation of your project. You will choose one option for **Presentation Content** and one for **Presentation Style**.

Presentation Options

Choose one from **each** category below.

1. Presentation Content

- **Case 1: Web-App Walkthrough:** Create a simple web app to demonstrate your model. Your presentation will be a live walkthrough of its functionality.
- **Case 2: Slidedeck:** Create a slide deck detailing your project from the problem statement and data to your model's final results.

2. Presentation Style

- **Case 1: Demo Day Presentation:** Deliver a live presentation to the class.
- **Case 2: Pre-Recording:** Record your presentation and submit the video.

Example Scenarios

- **Scenario A:** A student chooses a **Web-App Walkthrough** for their content and a **Demo Day Presentation** for their style. They have built a model that predicts whether a customer will churn. During the live presentation, they show a web app where they can input customer data and see the real-time prediction.
- **Scenario B:** A student selects a **Slidedeck** for their content and chooses to **Pre-Record** their presentation. They have built a convolutional neural network to classify images of different types of wildlife. Their video presentation walks through their slides, explaining their data, model architecture, and evaluation metrics, with a brief clip showing their model making predictions on new images.
- **Scenario C:** A student decides on a **Web-App Walkthrough** for their content and to **Pre-Record** their presentation. They built a machine learning model to predict house prices. Their recorded presentation shows them navigating their web app, inputting various house features, and demonstrating how the model's predictions change in real time.
